## BURTON INDUSTRIES ANNOUNCES FACILITY EXPANSION

**Ironwood, MI**—Burton Industries, Inc. is adding a second facility in Ironwood, MI. The new 13,000 square foot building is located near the Company's main production facility in the Ironwood Industrial Park. It will house program management, engineering, high level assembly operations and low volume manufacturing cells. The Company plans to invest over \$700,000 in equipment and increase its workforce by 25%. The additional space will enable the Company to expand its design services capabilities, upgrade SMT capability, add dedicated customer work cells, and expand harness and cable assembly operations.

"We were able to offset some of the cost of this expansion through city and state economic block grants. This enables us to invest more in equipment and job creation. We can deliver better value to our customers and our region gets business expansion as we will be hiring more people. It is a win all around," said Gary Burnett, Sr., Burton's CEO and president.

The facility is currently undergoing final fit-up. The new facility should be operational by first quarter 2012.
